## Education

|                                                                                                                                                                                     |             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>University of Petroleum and Energy Studies, India</b><br>Bachelor's in computer science and engineering (CGPA: 7.8)<br><i>Specialization:</i> Full-Stack Artificial Intelligence | 2022 – 2026 |
| <b>Bal Bhavan International School (12th, CBSE)</b><br>Percentage: 80%                                                                                                              | 2021 – 2022 |
| <b>ITL Public School (10th, CBSE)</b><br>Percentage: 90%                                                                                                                            | 2019 – 2020 |

## Skills

**Specialization:** AI & ML, GenAI & SWE Automation, Full Stack Web Development, DevOps, AI & ML Ops, AI Infrastructure  
**Programming & Development:** Python, C++, NodeJS, ReactJS, Spring Boot, Agentic AI, RAG, Training & Fine Tuning  
**Tools & Technologies:** MySQL, MongoDB, Git & Github, Docker, Linux OS, Kubernetes, AWS, GCP, Lang graph, Python ML Libraries (TensorFlow, Pytorch, scikit-learn, Pandas&Numpy, NLTK..), vLLM, Vector DB'S, Software Observability Stacks  
**Soft Skills:** Collaboration, Problem Solving, Adaptability, Team Training & Technical Knowledge Transfer

## Internships & Apprenticeships

### NEC Corporation (Apprentice) Sep 25 – Mar 26

- Analyzed GenAI tools (Devin, Kiro, Warp, Copilot) for Billing project via benchmarking metrics (Latency, LOC, Bugs, Coverage, Costs..) and Through UT & FT for determining best Tools for 40%+ workforce productivity boost.
- Supported QA/validation/deployment as engineer in 5+ projects across multiple domains and sectors, automating script-based checks with Python/JS Scripts and resolving 75%+ deployment bottlenecks to accelerate go-live by 50%.
- Engineered agentic AI system using Lang Chain & Lang Graph for automated test case generation & execution from project documentation, achieving 70% coverage boosts and slashing manual testing time by 90%+ in SWE pipeline.
- Co-developed an Agentic AI platform for 10+ AI Models deployed on Internal Servers via vLLM Inferencing, cutting operational overhead by 30% and increasing deployment scalability by 25%.

### NEC Corporation (Intern) Jun – Sep 2025

- Engineered an LLM-powered Intelligent Incident Response System (IIRS) using Lang Graph, Lang fuse, MCP, A2A, Grafana, and Prometheus, automating monitoring and reducing incident resolution time by 50%.
- Built IIRS POC into complete software solution with JavaScript dashboard UI, Integrated Visualization, Automated monitoring and Alerting, and GenAI & ML Data Processing within an agentic workflow, securing NEC client approval.
- Enhanced ITSM workflows with advanced RAG-based automation, improving resolution efficiency by 30% and training 10+ team members as Subject Matter Expert on Advanced RAG Implementations.

### Delhi Integrated Multi-Modal Transit System (Intern) Jun – Aug 2024

- Built a TensorFlow-based chat bot with web and PDF upload integration, increasing query handling accuracy by 20%.
- Applied Python ML models to analyze transit data and identify inefficiencies, enabling 15% better planning outcomes.
- Optimized workflows using NumPy, Pandas, Scikit-Learn, NLTK, and Matplotlib, reducing data processing time by 35%.

### Drishti Foundation Trust((Intern) May – Jul 2023

- Partnered with the Government of Delhi to support healthcare outreach across 10+ underserved regions.
- Coordinated distribution of essential medical services and supplies, improving delivery efficiency by 25%.
- Led awareness initiatives within communities, increasing participation in healthcare programs significantly.

## Projects

### Path Finder AI Aug – Oct 2024

- Developed a JavaScript-based navigation app with GPS and LLM-powered routing, reducing manual route planning effort by 40%.
- Implemented prompt-driven route generation, optimization, and elevation tracking, improving navigation accuracy and insights by 50%.

### COVID Management System Jun – Sep 2021

- Created a Python–SQL application for real-time COVID case tracking and vaccine availability, improving access to information by 30%.
- Integrated address validation, geolocation, and OTP-based SMS alerts, enhancing secure delivery of health updates by 25%.
